IV Therapy Special

replenish.
rejuvenate.
revive.

What is IV Therapy?

The abbreviation "IV" stands for intra-venous. IV therapy simply involves delivering liquids directly into the body through a vein. This is the fastest most efficient way to get therapeutic doses of nutrients directly into the body. By the time symptoms of disease have made their appearance it is sometimes too late for oral vitamins and minerals to make much of a difference. A *Myers' Cocktail* usually contains many B-vitamins (including B-12), Vitamin C,

Magnesium and Calcium. IV Therapy can help with

- ▶ Migraines
- ▶ Colds and Flu
- ▶ Asthma
- ▶ Fatigue
- ▶ Bacterial Illness
- ▶ Allergies
- ▶ Immune disorders
- ▶ Cardiovascular disease
- ▶ Anxiety and Depression
- ▶ Fibromyalgia
- ▶ and so much more!

With work, school and all of the "normal stresses in life" your nutrients can definitely get depleted. We are offering a SPECIAL on *Myers' Cocktail*. The cost is \$200 and includes appointment with our doctor, the

necessary labs needed to ensure your body is ready AND a *Myers' IV Cocktail*. This is over \$100 savings to you. We are also offering *Myers' Cocktails* packages if you decide to do more.

CALL US today to schedule your blood work and to book your IV.
